

INS & OUTS FOR HAPPY BREASTS

Breast Thermography & Myofascial Release

Take part in the *Happy Breasts Clinic* - 60 minute session includes a Breast Thermography & 30 minute Myofascial Release.

THERMOGRAPHY's role in breast disorders is to help in early detection and monitoring of abnormal physiology and the establishment of risk factors for the development or existence of disease. This non-invasive treatment can provide needed information in order for your provider to create a specific health plan to assist in preventing disease.

MYOFASCIAL RELEASE (MFR): MFR is a non-invasive way to improve mobility, decrease scarring, and eliminate cysts. During this portion of the clinic you will have the option to learn self-care techniques for the breast OR receive 30 minutes of hands-on MFR for the breast OR a combination of both.
